Topics for paragraphs

1 [The Amazon rain forest ecosystem :](#)

The Amazon rainforest is a very important ecosystem. All the living things in the rainforest need each other. Birds and animals help the trees. They take seeds to other parts of the forest and new trees grow. When people cut down trees, animals will lose their homes!

2 [Ecosystem:](#)

An ecosystem is all the animals and plants in an area. The ecosystem can be as small as a pond or as big as a forest. In an ecosystem, living things such as plants and animals interact with non-living things such as water, rocks, and soil. The different species in an ecosystem make a community. They all need each other to survive.

3 [Our heart :](#)

The heart is an important organ. Our heart beats over 100,000 times per day. A man's heart is heavier than a woman's heart. A man's heart beats slower than a woman's heart. The right side of your heart pumps blood into your lungs. The left side of your heart pumps blood back through your body.

4 [Nabq National Park :](#)

We went to Nabq Park. We went there to learn why mangrove forests are so important for the marine ecosystem. Hundreds of different kinds of fish, birds, insects, and other animals live in the mangrove forest. We could see many little fish swimming on the shallow water among the roots of the trees, where bigger fish and other animals couldn't catch them. That is how mangrove trees help young fish to survive.
