A. Read the following text then choose the correct answer

a, b, c, or d

(النموذج الأول)

The first steam engine was built in 1698 by the mechanical engineer Thomas Savery. The development of this device led to the emergence of the Industrial Revolution in the coming years, which allowed the beginning of the mass production of engines of various functions. The inventions of the Scottish engineer James Watt gave rise to the modern mechanical engineering, which opened the door wide for the development of specialised machinery and their maintenance tools during the Industrial Revolution and led to the rapid growth of mechanical engineering in its native Britain and abroad. Chemical engineering, like mechanical engineering, developed in the nineteenth century during the Industrial Revolution. The work of James Maxwell and Heinrich Hertz in the late nineteenth century gave birth to the field of electronics and electrical engineering. Today, aeronautical engineering deals with aircraft design; this field of engineering has been growing day after day to allow humans make their dreams come true to invade the outer space by designing better spaceship. Finally, with the advent of computer technology in the 1990's, the first search engine was built by the computer engineer Alan Emtage.

1. The engineer who invented the steam engine is -----

- a. Heinrich Hertz b. James Maxwell
c. Alan Emtage d. Thomas Savery

2. ----- developed in the 19th century.

- a. Only the mechanical engineering
b. Only the chemical engineering
c. Chemical and mechanical engineering
d. Architecture

3. James Watt paved the way to the emergence of -----

- a. medical engineering
b. modern mechanical engineering
c. chemical engineering
d. electronics engineering

4. Alan Emtage was the engineer who designed the -----

- a. first search engine b. construction of the Pyramids
c. cotton gin d. spaceship

5. Aeronautical engineering is related to the design of -----

- a. planes and spaceships b. trucks and cars
c. steam engines d. search engines

6. The main idea of the text is -----

- a. the history of technology b. computer engineering
c. the history of engineering d. electrical engineer

B. Read the following text then decide whether these statements are true or false

Citizenship is not only the state of being vested with the rights and duties of a citizen, but it can also be defined as the character of an individual who is viewed as a member of a particular society. The concept of citizenship first arose in towns and city-states of ancient Greece, disappeared in Europe during the Middle Ages and crystallized in the 18th century. The concept of citizenship has never been fixed or static, but constantly changes within each society. While citizenship has varied considerably throughout history, and within societies over time, there are some common related elements. Citizenship refers to many aspects of society such as family, military service, individual's freedom, ideas of right and wrong, paying taxes and patterns for how a person should behave in society. Although Syrian citizenship provides many rights, it also involves many responsibilities. Syrian government protects the rights of each individual regardless of their background or culture. In spite of the fact that all Syrian citizens enjoy freedom, protection and legal rights, they also have responsibilities that are voluntary as well as obligatory.

(النموذج الثاني)

E-government means everything from online government services to exchange of information and services electronically with citizens, businesses, and other bodies of the government. Traditionally, e-government has been considered as the use of Information and Communication Technology (ICT) for improving the effectiveness of government agencies and providing government services online. Nowadays, the framework of e-government has been evolving to include the use of ICT by government for conducting a wide range of interactions with citizens and businesses as well as open government data and the use of ICT to enable novelty all over the country. E-government enables the use of ICT more effectively and professionally by the delivery of government services to citizens and businesses, applying ICT to government operations and achieving public goals by digital means. The essential principle of e-government is to improve the internal mechanisms of the public sector. This can be done to reduce financial costs and transaction times, integrate work flows and processes and enable effective resource applications across the various public sector agencies aiming for workable solutions.

1. E-government -----

- a. unable to provide its services on the internet
- b. refers to exchange of information with another country
- c. aims to exchange of information and services with businesses only.
- d. works electronically for the benefit of its citizens, businesses, and other bodies of the government.

2. E-government -----

- a. increases financial costs and transaction times.
- b. decreases financial costs but increases the period of transactions.
- c. decreases financial costs and transaction times.
- d. makes it impossible to get transaction in short time.

3. In order to conduct a wide range of interactions, e-government depends on -----

- a. ICT
- b. ITC
- c. MRI
- d. IDC

4. The main purpose of E-government is -----

- a. to improve the external mechanics of the private sector
- b. to improve the internal mechanisms of the public sector
- c. to prevent the public sector of working properly
- d. to combine between public and private sectors

5. E-government tries to -----

- a. improve the effectiveness of government agencies
- b. get rid of novelty
- c. avoid dealing with public sector
- d. reduce the effectiveness of government agencies

6. The main idea of the text is -----

- a. E-government
- b. The framework of public sector
- c. E-learning
- d. The framework of private sector

B. Read the following text then decide whether these statements are true or false

The human body is a wonderful machine which performs several functions without rest from birth. Our body continues to work, without stopping for a second. The main organs of the human body are lungs, heart, kidney, liver and brain. These organs work together and are controlled by the brain. Each system such as digestive system, excretory system, circulatory system, endocrine system, nervous system or muscular system carries out a major function. All of them are controlled by the brain which gives us intelligence to use our physical and mental abilities. The body has more than 50,000 living cells of two hundred different types. These cells include neurons (nerve cells) and glands (specialized cells). The hormones and enzymes are produced and secreted by these glands that perform different functions. The human body is covered by the skin, which is a flexible covering that protects the body and keeps water and harmful germs out. The body's strong internal framework (skeleton) is made of 206 bones, connected at the joint, such as in legs. These joints help us to move. The backbone supports the head and limbs and protects the spinal cord. Between the skeleton and the skin, there are about 500 muscles. Nerves spread from the brain to all parts of the body, carrying signals in the form of tiny electrical impulses.

7. All organs of the human body are controlled by muscles.

8. The spinal cord is protected by backbone.

9. The skin is an inflexible covering that protects the body.

10. The human body works constantly without stopping.

11. Hormones and enzymes are produced by specialized cells called glands.

12. skeleton is responsible for carrying signals to the brain.

(النموذج الثالث)

E-learning is the use of networked information and communication technology in teaching and learning. It combines all educational activities that are carried out by individuals or groups working online or offline, and on networked or separate computers and other electronic devices. E-learning is highly interactive and relies heavily upon graphics, video, and audio. However, there are often simulations to support in learning achievement, which could include 3D components. New software training is an example of a course that often includes a high degree of interactivity and simulations. The impact of e-learning is noticed in self-responsibility among students when they decide to study or not. It helps expand their knowledge by researching using the World Wide Web. Teachers allow them to acquire various computer skills and apply their knowledge and skills. This helps in the communication with their students at all times and increases the students' ability to study on their own. The importance of e-learning lies in the fact that the students need to be busy with what they are doing to improve learning outcomes. Learning can happen anywhere, anytime and anyhow. It encourages students to seek more from school.

1. The underlined It refers to -----

- a. communication b. information
d. e-learning d. computer science

2. E-learning -----

- a. can be applied in one place
b. reduces the students' ability to study on their own.
c. happens in a specific time
d. is available in anywhere, anytime and anyhow.

3. E-learning helps students to -----

- a. be self- dependent and self-responsible.
b. be irresponsible
c. avoid discipline and commitment
d. be unable to interact with their teachers

4. Simulations and interactivity are ----- in online learning.

- a. useful b. useless c. unnecessary d. ineffective

5. One of the following isn't true about e-learning -----

- a. it allows students to attend traditional classes
b. it uses technology in teaching and learning
c. it includes all educational activities
d. it uses various elements to make learning easier

6. The word acquire means -----

- a. to encourage people b. to get or buy something
c. to control yourself d. to celebrate something new

B. Read the following text then decide whether these statements are True or False

Human rights are the rights which one acquires by being alive, while civil rights are the rights that one obtains by being a legal member of a certain political life. In other words, civil rights are the rights of citizens to political and social freedom and equality. They guarantee equal social opportunities and equal protection under the law, regardless of race, religion, or other personal characteristics. Civil and political rights are a class of rights that protect individuals' freedom from violation by governments, social organizations, and private individuals. They ensure one's right to participate in the civil and political life of society and the state without discrimination or repression. Unlike other rights concepts, such as human rights or natural rights, in which people acquire rights inherently from God, civil rights must be given and guaranteed by the power of the state. Civil rights are an essential component of democracy; when individuals are prevented from participating in political society, their civil rights are being denied.

7. Human rights are guaranteed to each individual during lifetime.

8. Natural rights are acquired from God.

9. Civil rights are the rights which one acquires by depending on race and religion.

10. Democracy depends mainly on the civil rights.

The word "robot" stems from the Czech "robotnik" which means a "slave". Man has built a robot after his/her image. Possibly, that is why human beings have a variety of strong emotions, both negative and positive towards robots. The relative advantage of robots and intelligent machines is accompanied with their ability to play a range of movements and thinking endlessly and tirelessly. When designing robots, it is essential for planners to focus on the robots' ability to follow patterns. Due to this engineering reality, robots are certainly specialised in the first step. Another complicated sort is the generalised robot, which can to some extent imitate humans. In the future, the memory of robots is expected to become very extensive. This will allow huge amounts of data storage, the thing which will be reflected in the robot's ability to fulfil a lot of operational tasks. Consequently, the use of robotics will be expanded. Robots offer people a helping hand to focus on the creative process when relying on such intelligent machines to take care of unpleasant physical and mechanical work. The greatest benefits of robots should mean for people staying away from unhealthy environments, such as mines and deep waters. For many industrial countries, using robots could increase production with low costs.

1. One of the following isn't true about robots -----

- a. They work and think for a limited period of time
- b. They can work and think without getting tired

- b. enemies
- c. unwanted
- d. Both (A & B)

5. With the use of robots, production -----

- a. will decrease only in quantity
- b. will decrease in quantity and cost
- c. will increase in quantity and will cost less
- d. will increase in quantity and will cost more

6. Robots that can imitate humans are classified as a / an -----

- a. completed sort of generalised robots
- b. simple sort of specialised robots
- c. uncomplicated
- d. uncomfortable

B. Read the following text then decide whether these statements are True or False :

UNICEF originally known as the United Nations International Children's Emergency Fund, is responsible for providing humanitarian and developmental aid to children worldwide and it has won the Nobel Prize, the first to be awarded to an organisation. Despite being highly active in fundraising, awareness, relief work and research, very few people know the origin of the organisation. UNICEF is supported entirely by the voluntary contributions of governments, non-governmental organisations, foundations, corporations and private individuals and receives no funding from the assessed dues of the United Nations. Most of the fundraising is done by UNICEF's 36 national committees, the voluntary support of millions of people around the world, partners in government, civil society and the private sector. UNICEF was created in 1946 and began with a definite mission of providing emergency food and healthcare to children in the countries that had been destroyed by World War II. In 1953, its original name was changed to the United Nation's Children Fund to reflect its broader mission, but it retained the original acronym, after being officially adopted as a permanent branch of the UN in 1954.
