

**A- Read the following text and choose the correct answer (60 marks)**

In ancient times, people used to cure sickness using plants, herbs and other materials. In countries such as Greece, India, China and others, patients were treated mostly in temples. The practice of medicine during the Middle Ages was empirical; it focused mainly on curing illnesses rather than discovering their causes. At that time, cures continued to be a mixture of superstitions, herbal remedies and bleeding; people were bled to reduce inflammation which was then thought to be the root of all diseases. Moreover, medical schools were established, but most people never saw a doctor because of the high-cost treatments. Around the 16<sup>th</sup> century, medicine witnessed ground breaking developments such as vaccination, surgery and microbiology. Modern medicine started to emerge in the late 18<sup>th</sup> century and therefore, there were many improvements on medical tools and machines, especially after the Industrial Revolution. In the 1800s, physicians learned that illnesses were caused by germs and hospitals began to focus on keeping clean to keep germs away. As a result, nursing came to be thought of as a respectable job.

**B- Read the following text, then put True or False: (60 Marks)**

Medicine is the science dealing with health and how to cure all kinds of diseases. Medicine has advanced amazingly over decades. The emerging medical devices has evolved saving countless lives. For instance, X-ray imaging, Magnetic Resonance Imaging, Robotic Surgery and Organ Transplants. These breakthroughs helped surgeons diagnose, monitor and treat many medical conditions. X-ray imaging uses an external radiation to produce images of the body without having to make an incision. Also, MRI scanners use strong magnetic fields and radio waves to generate images of the organs in the body. During Robotic Surgery, surgeons can perform very complex steps with more accuracy, flexibility and control than it is possible with conventional techniques. Robotic Surgery results in smaller incisions which reduce pain and lead to less time spent in hospitals. Organ Transplants allow people to return to normal activities by transplanting various body parts like heart, liver and kidney. In short, medicine aims to promote and maintain health and well-being of patients. It is certain that medicine will continue to develop in ways we have yet to imagine.
