 a) The Prime Minister announced, that more job opportunities were available.
 b) The Prime Minister announced that, more job opportunities were available.
 c) The Prime Minister, announced that more job opportunities were available.
 d) The Prime Minister announced that more job opportunities were available.

B) Reading Comprehension:

"Protection of the Environment"

Protection of the environment refers to the responsible use of natural resources to maintain ecological balance. It involves controlling pollution, conserving biodiversity, and ensuring sustainability. This practice helps the Earth remain a healthy place for all living things.

People can protect the environment by recycling waste, saving energy, and reducing harmful emissions. Governments must also enforce environmental laws and support green initiatives. When everyone does their part, we can truly make a difference.

Environmental protection is vital because it ensures clean air, safe water, and fertile soil. It also helps reduce climate change and preserve natural habitats. As the saying goes, "*An ounce of prevention is worth a pound of cure.*"

If environmental protection is ignored, the consequences will be severe. Pollution will spread like wildfire, and future generations will suffer from diseases and resource shortages. We cannot afford to turn a blind eye to such a crisis.

In conclusion, protecting the environment is everyone's duty, and it must be taken seriously. Every small action counts and contributes to a larger global effort. Together, we can create a sustainable future for the planet we call home.

Choose the correct answer from a, b, c or d:

12. What is the writer's main purpose in writing this passage?

- a) To describe human inventions
- b) To criticize government policies
- c) To highlight the need for environmental protection
- d) To explain climate change only

13. The word "preserve" in paragraph 3 most likely means

- a) To destroy completely
- b) To protect and keep safe

- d) Nature can fix itself without help

19. What must governments do, as mentioned in the passage?

- a) Ignore public opinion
- b) Enforce environmental laws and support green initiatives
- c) Increase pollution
- d) Cut down forests

Machinery refers to the collection of machines used to perform various industrial and domestic tasks. It includes tools, engines, and devices that operate automatically or with minimal human effort. In modern life, machinery has become the **backbone of production** and comfort.

Machines work by converting one form of energy into another to accomplish specific tasks efficiently. For instance, an engine transforms fuel into mechanical power. As the saying goes, "Time is money," and machinery saves both.

If machinery did not exist, most human activities would be extremely slow and

physically exhausting. Industries would face delays, and progress would come to a standstill. Life without machines would be like "rowing against the tide."

Compared with manual labor, machinery performs tasks faster, more accurately, and on a larger scale. While human effort involves fatigue, machines can work continuously without rest. However, *it* still requires proper maintenance and human supervision.

In conclusion, machinery has transformed the world and simplified countless processes. It plays a crucial role in development and daily life. Proper use and care of machines ensure long-lasting benefits for humanity.

Choose the correct answer from a, b, c or d:

20. The central focus of the passage is

- a) Machinery and its impact on human activities
- b) The invention of the wheel
- c) The history of transportation
- d) The use of renewable energy

21. A suitable heading for paragraph 4 would be

- a) Human Failures
- b) Machinery vs. Manual Work
- c) Energy and Electricity
- d) Mechanical Accidents

22. It can be inferred that the writer believes machinery

- a) Should be banned
- b) Works without any energy
